1. Applicant's election without traverse of Group I, claims 1-2 in the reply filed on 9/26/05 is acknowledged.
2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Crane et al (US. 5,774,304.

Crane et al discloses a recording medium drive (figure 1) having a recording medium (figure 1); a head slider 20 opposed to the recording medium at a front end of the head suspension 22; a load bar and a ramp member (Official Notice has been taken that the typical disk drive has a load bar and a loading ramp for the actuator); a slider body defining a medium-opposed surface hemisected into first and second areas by a centerline extending in a longitudinal direction of the slider body (figure 9).

Crane et al, figure 9, discloses that the rail (310, 316) on the right hand sided of the center line 321 is larger than the rail (312, 340) on the left hand sided of the center line 321; therefore, it inherently discloses that the left hand sided (second area) is designed to generated a positive pressure larger than a positive pressure generated at the right hand sided (first area), or vice versa, when a load acting on the slider body in a direction toward the recording medium decreases (see also column 8, lines 9-27), all as set forth in claims 1 and 2.
